

Due to a new Federal regulation, all water utilities are required to provide a report containing information on their drinking water sources & quality.

Mike Bartels is the contact person for the Village of Avoca and can be reached at (608-532-6482), if you have any questions.

Avoca's drilled well is located at 207 N. Fifth Street and 110 feet deep, with about 90 to 95 feet of water.

In 1981 the well was drilled and in 1997 the pump was pulled and checked we can now pump 350 gallons a minute.

There is approximately 4.2 miles of water line in the old system. In 1997 approximately 2.9 miles of waterline was added along First Street, and Lakeshore Drive, Locust Street, Campsite Road and North Seventh Street. There is approximately 7.1 miles of water line in the Village.

In 1984 a 144,000 gallon concrete underground reservoir was built. The old underground concrete reservoir held approximately 49,000 gallons of water. New water mains were installed at that time from the reservoir to First and Wisconsin Street, east on Wisconsin Street to Fifth Street, Main Street North to the Railroad Tracks on Second Street, Front Street south to Main on Sixth Street, William Street north to Wisconsin Street, east to Seventh Street.

In 1992 the water main on Clyde Street was looped from Second Street to Fifth Street.

In November of 1999 the Village cleaned the reservoir. The pump run for three days to keep the Village in water until the bacteriological Analysis Report came back. This report was prepared by the State Lab of Hygiene.

In 1999 the water was dug in to the new bath house at the campground.

In 2004 the reservoir was inspected again this has to be done every five years.

In 2006 the four inch water mains on William Street from Fifth Street to Second Street, And Second Street from William Street to Main Street (Hwy 133) were replaced with new six inch water main. The four inch water main on Main Street from Patten Street to Fifth Street was replaced with new eight inch water main. Approximately 4090 feet of Four inch water mains were replaced.

In 2007 the well was pulled and checked this is done every 10 years.

In 2009 the four inch water mains on Wisconsin Street from Fifth street to Seventh Street and sixth street from Wisconsin to Main (HWY 133) were replaced with new Eight inch water main. The four inch water main on Front street from Fifth Street to Seventh street were replaced with new eight water mains. The six inch water mains on N. Fourth St , Front St and N. Fifth Street were replaced with new eight water mains.

In 2011 485 feet of six inch water main on S 6th Street was extended from Wisconsin St to William St.

In 2012 875 feet of six inch water main on Market Street was extended from from N 5th Steet to N7th Street and 100 feet of six inch water main on N7th Steet was extended from Market Street to Clyde Street

In 2014 940 feet of six inch water main was replaced On South 3RD Street. 940 feet of six inch water main on South 4TH Street. 1,200 feet of six inch and 500 feet of 8 inch water main on South 5TH Street.

The Village has developed a hazard mitigation plan for emergency situations, including disaster, terrorism, vandalism etc.
